Elements of Design

A design is a visual plan you can use to create your 4-H project. Everything you can see has a design. When you describe something you see, you use words that tell about the lines, shapes, colors, textures, and spaces. Line, shape, color, texture, and space are the basic elements of design.

The elements of design are important to everyone who works in textiles and clothing, home interiors, woodworking, photography, landscaping, architecture, foods, and the visual arts. If you understand the design elements, you will be more successful with your 4-H projects.

Line

Lines can be horizontal, vertical, dotted, zig-zag, curved, straight, diagonal, bold, or fine. Lines can show direction, lead the eye, outline an object, divide a space, and communicate a feeling or emotion.

Shape

Shapes are made by connecting lines. Circle, square, triangle, and freeform are words used to identify shapes. Look at the objects around you and describe their basic shapes. Are they one shape, or are they a combination of many shapes? After doing this several times, you will begin to understand what shape really is. Line creates two dimensional or flat shapes. When shapes are three dimensional, we call them forms. A circle is a shape; a ball is a form. A square is a shape; a cube is a form. A drawing is a flat shape; a sculpture is a three-dimensional form.
**Color**
Color is described with the words hue, value, and intensity. Hue refers to the name of the color—red or blue, for example. Value tells the lightness or darkness of a hue. Intensity refers to the brightness or dullness of a hue. You can use a color wheel and learn how colors work together in the publication, 4H-633, *Color*.

**Texture**
Texture is the surface quality of an item. It’s how something feels when touched, or looks like it would feel if touched. Sandpaper is rough. Velvet is smooth. A drawing of a tree stump could show rough outer bark and a smooth inner surface. Search for ways to add texture to your projects. Texture adds variety and interest.

**Space**
Space refers to the area that a shape or form occupies. It also refers to the background against which we see the shape or form. Space can be defined as positive and negative. The positive space of a design is the filled space in the design—often it is the shapes that make up the design. Negative space is the background. The negative space in design is as important as the positive area.

---

**Principles of Design**
Some combinations of design elements (line, shape, color, texture, and space) work better than others. Here are some guidelines to help you understand why some combinations work and others do not work as well. These guidelines—rhythm, proportion, emphasis, balance, and unity—are the principles of design.

**Rhythm**
You have felt rhythm in music. Rhythm is also a part of things you see. It allows the eye to move from one part of a design to another part.

Rhythm can be created by:
- Repeating a color, shape, texture, line, or space when designing.
- Varying the size of objects, shapes, or lines in sequence (small to large).
- Using a progression of colors from tints to shades (light blue to dark blue).
- Shifting from one hue to a neighboring hue (yellow to yellow-orange to orange to red-orange to red).
Honesty of Design

Honesty of design refers to three specific areas—media, form, and function.

You are being honest with a medium when you are familiar with that medium, use it to its best advantage, and avoid making it look like something else. Clay should not be glazed to look like wood, and wood should not be painted to look like clay bricks. Honesty related to form and function means that parts of a design should work in ways they were intended. Doors on woodworking projects should not be fake; they should open. A flower pot should be designed to complement the flowers and not draw more attention to the pot.
Evaluating Design
Evaluating your designs and those of others can help you improve your understanding about design.

You can get help in evaluating your work from many people, among them your parents, other 4-H’ers, leaders, teachers, and fair judges. There is seldom only one way to improve a design, so don’t be surprised if different people have different ideas on how you might change your work. In the end, the decision is yours. Becoming a good designer takes practice. The more you talk about and play with the elements and principles of design, the easier it will be to use them effectively.

Here are some questions to ask yourself about your designs.

1. Where did you get the idea for your design?
2. Describe one of the design elements. How did you use it?
3. What do you like about the way your design looks?
4. What might you change another time?
5. Is your design honest in media, form, and function?
