As new agriculture entrepreneurs consider producing and marketing food products and current producers seek new markets, they need to conduct preliminary research to determine if there are rules, regulations, certifications, or licenses required for their product or selected market. This series of publications will help determine the requirements for licensing and for processing and selling various food products based on business size, sales volume, the level of processing, and market. The flowchart will guide Iowa producers and processors to the appropriate state agencies or departments. Agency and department contact information, as well as additional resources, are on the reverse side of this publication.

**Definition of seafood:** finfish, shellfish (mollusks and crustaceans), reptiles (turtles and alligators), amphibians (frogs), invertebrates (jellyfish, sea cucumber and sea urchin), and roe (eggs).

**Do you produce farm-raised seafood for human consumption (not for stock)?**
