

ISU FISHERIES EXTENSION

Managing Iowa Fisheries

Calculations and Conversions for Fisheries

Calculating Surface Areas

Facts to Remember

Area of rectangle = length x width

Area of circle = radius² x 3.14 (π)

radius = $\frac{\text{diameter}}{2}$

1 acre = 43,560 square feet

1 acre-foot = 1 acre of water 1 foot deep

Rectangular pond

Area = 500 ft. x 250 ft. = 125,000 square ft.

Acreage = $\frac{125,000}{43,560} = 2.9$ acres

Circular pond

Area = 150² ft. x 3.14 = 70,650 square ft.

Acreage = $\frac{70,650}{43,560} = 1.6$ acres

Irregular shaped pond

Area 1 = 80 ft. x 70 ft. = 5,600 square ft.

Area 2 = 200 ft. x 90 ft. = 18,000 square ft.

Area of pond = 5,600 ft. + 18,000 ft. = 23,600 square ft.

Acreage = $\frac{23,600}{43,560} = 0.5$ acres

PM 1352d February 2009

Calculating depth and water volume

Pond with uniform slope on bottom

Maximum pond depth = 15 ft.

Depth = $\frac{1}{2}$ (maximum depth)

$$= \frac{15}{2} = 7.5 \text{ ft.}$$

If surface area of pond is 3 acres,

water volume = 3 acres x 7.5 ft = 22.5 acre-feet.

Pond with irregular bottom

1. Measure depth at several uniformly spaced points.
2. Add these values together and divide by number of depth readings.

Example: Depth in feet

A	=	6
B	=	10
C	=	8
D	=	5
E	=	3
F	=	6
		38

$$\text{Average depth} = \frac{38 \text{ ft.}}{6} = 6.3 \text{ ft.}$$

Useful Conversions

1 liter of water

= 1 kilogram
= 2.205 pounds

1 milliliter or cubic centimeter of water

= 1 gram
= 0.0353 ounce

1 gallon of water

= 8.34 pounds
= 3.785 kilograms

1 cubic foot of water

= 62.36 pounds
= 28.29 kilograms

1 fluid ounce

= 1.043 ounces
= 29.57 grams

1 acre

= 43,560 square feet
= 208.7 x 208.7 feet
= circle diameter 235.5 feet

1 acre-foot

= 1 surface acre 1 foot deep
= 43,560 cubic feet
= 2,718,144 pounds
= 1,233.49 cubic meters
= 325,851 gallons

1 cubic foot per second

= 448.83 gallons per minute
= 26,930 gallons per hour
= 646,320 gallons per day
= 1.699 cubic meters per minute
= 101.93 cubic meters per hour
= 2,446 cubic meters per day

1 part per million (ppm)

= 1,226 grams per acre-foot
= 0.0283 gram per cubic foot
= 2.718 pounds per acre-foot
= 0.0038 gram per gallon
= 0.0000623 pound per cubic foot

1 percent solution

= 38 grams per gallon
= 1.3 ounces per gallon
= 0.622 pound per cubic foot of water

General dilution formula: (desired concentration x desired volume) / (concentration of stock solution) = volume of stock solution to be diluted to desired volume

Rotenone applications = 3 ppm

1 gal. of liquid rotenone per acre-foot = 3 ppm

Pounds to Add to Obtain Desired Concentration
